

GOOGLE STREET VIEW

The purpose of the tutorial is to showcase the functionality of the Google Street View tool. Google Street View gives you the option of viewing a specific area in detail.

1. To find the **Google Street View** tool, go to the **Map Tools** icon, and select **Google Street View**.

2. After selecting the Google Street View tool, two pop-up windows will appear.

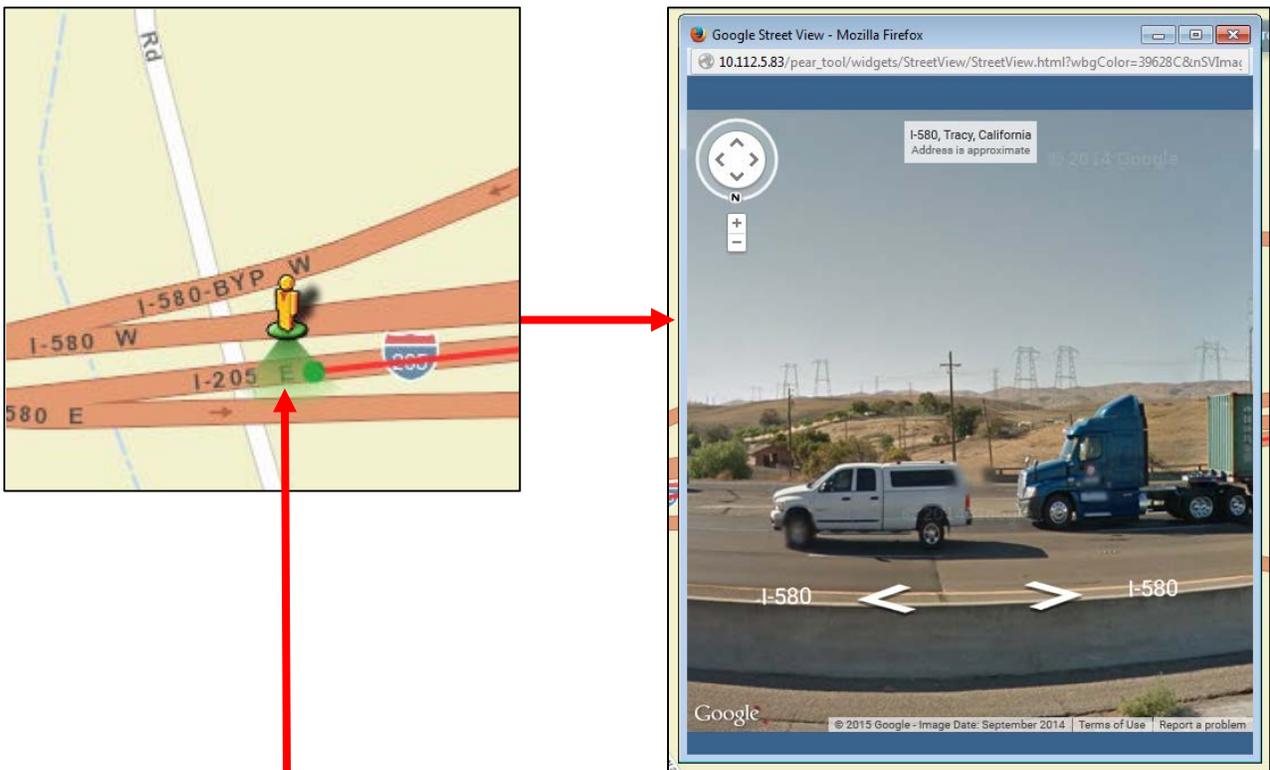

NOTE: Make sure you enable pop-up windows for this site when using the Google Street View tool. For instructions on how to enable popups, see the first question of the PEAR GIS FAQs at http://10.112.5.83/external_PEAR/docs/faqs.html.

3. To use the Google Street View tool, click, drag & drop the pegman icon in the desired location on the map.

NOTE: You must zoom in to use the Google Street View tool.

4. Once you placed the pegman icon in the desired location on the map, you will see the street view of that location.

Place the pegman icon in the desired location to display the street view for that area in the Google Street View display window.

5. To maneuver your view for that location, click on the circled arrows icon in the desired direction.

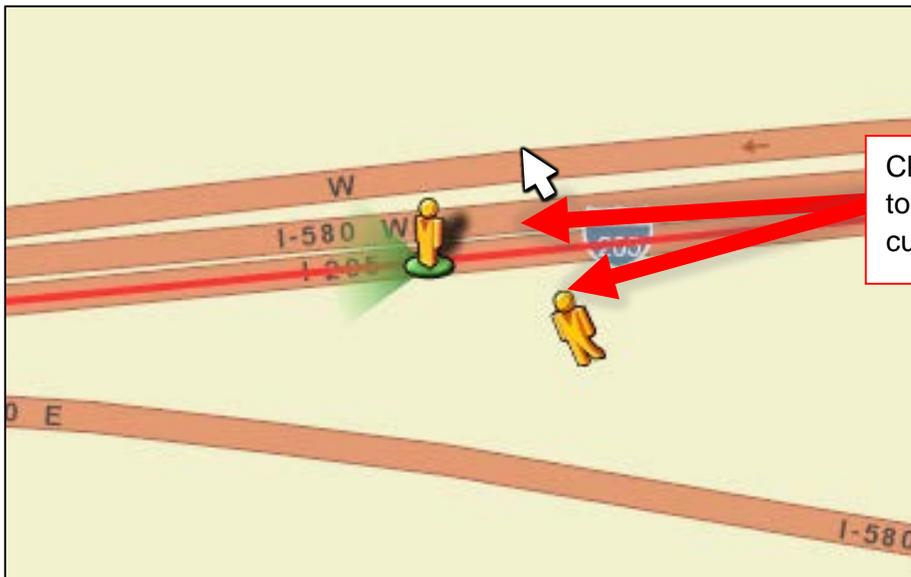

Click on circled arrows icon to display different views of that location.

Move forward or backward to view the area in that direction.

NOTE: The up and down arrows in the circled directional arrows icon, will only let you see the sky when you click the **^** arrow, and the ground when clicking on the **v** arrow. The arrows do not go back and forth.

6. To view the street view for different locations on the map, click on the pegman icon, drag & drop in the desired location. The top of your cursor will be the point where you drop the pegman icon.

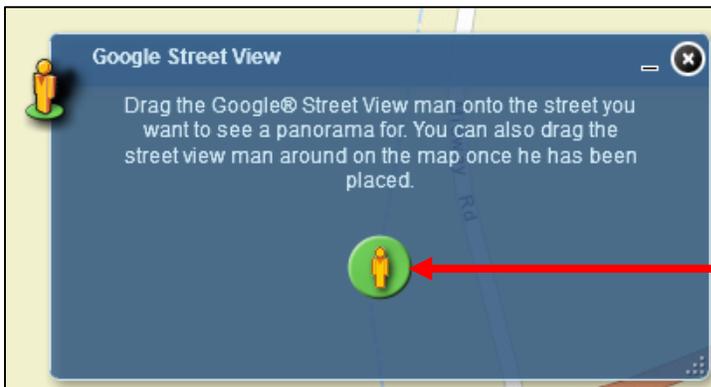

Click and drag & drop the pegman icon to move to a different location. Top of cursor is where icon will be placed.

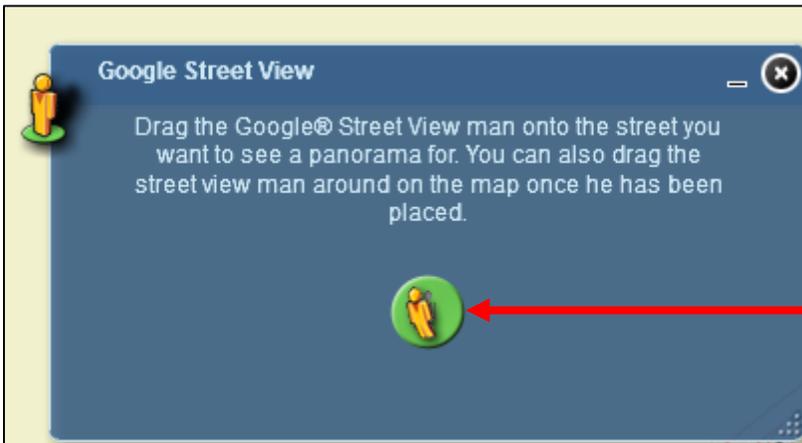

7. If you want to reset the current street view, click the **Clear** link on the Google Street View pop-up window to clear the display.

Click on the Clear link to clear and reset the current street view.

8. You can now click and grab the pegman icon to view the other locations.

Click and drag & drop to a different location.
